

ARTIFICIAL INTELLIGENCE

GEN AI & THE LAW

AI IN LEGAL PRACTICE

Generative AI, particularly large language models, are being increasingly used to save time on administrative tasks such as legal document drafting and contract review.

TRUST BUT VERIFY

Lawyers should always double check AI-generated results to ensure accuracy, especially in tasks like contract reviews or legal research summaries.

REASONING MACHINE?

While AI can process vast amounts of data, it struggles with nuanced legal reasoning, such as interpreting case law or complex statutes.

CRAFTING AI PROMPTS

Accurate legal prompts are essential. For example, specifying jurisdictional context helps AI generate more relevant legal analysis or document drafts.

RAPID EVOLUTION

Generative AI technology is advancing quickly, and legal professionals should regularly test new models to stay ahead of industry changes and avoid outdated practices.
